

Supplementary Table 1

Interaction matchprints for 42 known thrombin inhibitors, labeled by PDB code, followed by the five new inhibitors from SLIDE screening, labeled by ZINC code. Interactions are highlighted in grey, showing the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions).

Supplementary Table 2

Interaction matchprints for 42 known thrombin inhibitors, labeled by PDB code, followed by 27 NCI compounds obtained for testing, labeled by their ZINC codes. * denotes confirmed SLIDE inhibitors. Interactions are highlighted in grey, with the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions) listed.

Supplementary Table 3

Interaction matchprints for the 100 top-scoring candidates according to EON/1ppb. Interactions are highlighted in grey showing the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions).

Supplementary Table 4

Interaction matchprints for the top-scoring 100 candidates according to EON/1a5g. Interactions are highlighted in grey, showing the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions).

Supplementary Table 6

Interaction matchprints for the top-scoring 100 candidates according to DrugScore. Interactions are highlighted in grey, showing the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions).

[illegible]

Supplementary Table 7

Interaction matchprints for the top-scoring 100 candidates according to AffiScore. Interactions are highlighted in grey, showing the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions).

Supplementary Table 8

Interaction matchprints for the top-scoring 100 candidates according to AffiScore/N. Interactions are highlighted in grey, showing the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions).

Supplementary Table 9

Interaction matchprints for the top-scoring 100 candidates according to GOLD score. Interactions are highlighted in grey, showing the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions).

Supplementary Table 10

Interaction matchprints for the top-scoring 100 candidates according to GOLD score - S(int). Interactions are highlighted in grey, showing the number of ligand interactions with the corresponding thrombin atom (for polar interactions) or side chain (for hydrophobic interactions).

Supplementary Table 10

[illegible]

Supplementary Figure 1. Comparison of chemical diversity within each set of top-scoring compounds. Each pair of molecules ranking within the top 100 was aligned and scored for chemical similarity by ROCS, using the Mills-Dean color forcefield. The resulting heat maps show the rank on the x- and y-axis for each compound within the top-100 according to: (a) AffiScore/N, (b) AffiScore, (c) DrugScore, (d) EON using the ligand from PDB entry 1a5g as reference, (e) EON using the 1ppb ligand as reference, (f) EON using the 1tbz ligand as reference, (g) GOLD score, and (h) Gold – S(int). Each pixel is colored by the similarity value for that pair of compounds, from blue (0) for no similarity to red (-7) for greatest similarity. This measure is size-dependent: identical large compounds have higher similarity values than identical small compounds.
